

Current state of New Testament textual criticism – and how computer-assisted stemmatology is changing the field

Pasi Hyytiäinen

Doctoral student

Paradigm shift

- The text-type theory is crumpling in front of our eyes:
 - Alexandrian : old, reliable text
 - Western: the result of the undisciplined and "wild" growth of manuscript tradition
 - Caesarean : ?
 - Byzantine: sought to smooth away any harshness of language
- Problem: NT texts do not arrange into types or groups

Revolutionary computer-assisted toolbox...?

Coherence-Based Genealogical Method (CBGM)

New Testament Virtual Manuscript Room

This site is devoted to the study of Greek New Testament manuscripts. The New Testament Virtual Manuscript Room is a place where scholars can come to find the most exhaustive list of New Testament manuscript resources, can contribute to marking attributes about these manuscripts, and can find state of the art tools for researching this rich dataset.

While our tools are reasonably functional for anonymous users, they provide additional features and save options once a user has created an account and is logged in on the site. For example, registered users can save transcribed pages to their personal account and create personalized annotations to images.

Coherence-Based Genealogical Method (CBGM)?

- **The general objective of CBGM...?**
 - To improve our understanding of textual history
 - Reconstruct its starting point, i.e. the initial text (Ausgangstext):
 - Authorial text
 - An edition
 - Archetype

Coherence-Based Genealogical Method (CBGM)?

- **Basic assumptions:**
- Contamination as a process
 - Every single manuscript have close relatives
- Coincidental rise of variants
- Every single manuscript text contains readings of different age

Coherence-Based Genealogical Method (CBGM)?

- CBGM is a hybrid between computer analysis and traditional textual critical methods
- Examples:
 - Computer analysis:
 - Pre-genealogical coherence
 - The degree of textual agreement among witnesses
 - Starting point of CBGM

Comparison of Witnesses

Version 2.0 (July 2013)

Enter Gregory-Aland numbers of the witnesses you want to compare. Enter 'A' for the initial text.

Witness 1	<input type="text" value="01"/>	Witness 2	<input type="text" value="02"/>
------------------	---------------------------------	------------------	---------------------------------

CBGM- A Phylogenetic method?

- Mink: Some procedures, for instance, cladistic analysis, provide diagrams similar to tree, but the branches have no direction...
- Wachtel: We are looking at kind of, yes, one might call it a degeneration and not an evolution...
- Differences:
 - CBGM creates stemmata of texts, not manuscripts, unlike with current usage of cladistics
 - CBGM dispenses with hypothetical ancestors, that stand in as lost ancestors, whereas cladistics does not
